Bristol City Council

Creative Parking Solutions is proud to announce a new partnership with Bristol City Council to operate its four main leisure centre car parks in the city. The installation of the system will put a stop to abuse the car parks have undergone by non user (ie local taxis, office/shop workers). The new system will allow members of the public plentiful free parking spaces. In order to ensure a smooth flow of operations, the car parks will have a maximum stay of 2 hours.

Watford Junction

We are delighted to report the recent opening of our new car park opposite Watford Junction station. Commuters using the station, which is located on the Virgin/Midland Mainline routes, have never had a more convenient way to park. The car park has proved to be a big hit. A "Phone and Pay" partnership has also been established which offers a quick and efficient payment system. Car park users simply pay for parking via telephone or mobile app.

Hove Coral Leisure Centre/Greyhound Track

We have designed a bespoke parking control system for Coral Leisure Centre and Coral Greyhound Stadium in Hove, Sussex. Leisure Centre members and Greyhound Stadium visitors simply tap their registration numbers into the strategically located touch-screens to obtain free parking. Other vehicles are subject to maximum stay enforcement and charging.

Our operation in Hove is totally barrier-less, resulting in congestion free ingress and egress from the car park. Using ANPR to monitor vehicle movements we are now able to enforce the parking regulations, and also provide detailed user statistics to our client.

The Creative Team

Merry Christmas and a Happy New Year from all at Creative Parking Solutions. To reflect on a busy year, the company would like to thank all clients and members of staff for their operational support. The company will soon enter its 17th year of operations, 8th year as ANPR market leader, and thank you to all for making it happen.
